

GreenCo

Complete Process & Requirements Reference

PART 1

Business Requirements Document

1. Document Purpose & Scope

This BRD defines the end-to-end functional workflow for company onboarding, project initiation, and assessment submittal on the GreenCo platform.

2. End-to-End Workflow Overview

The flow is strictly sequential. Stage gates enforced by the system prevent any step from being bypassed. Each entry below shows the step, owner, entry condition, and exit condition.

- Step 01 — Company Registration: Owner is Company. Entry is open (no prerequisites). Exit: Company record created and admin notified.
- Step 02 — Company Login: Owner is Company. Entry requires registration approved. Exit: Authenticated session active.
- Step 03 — Admin Quick View: Owner is Admin. Entry requires company registered. Exit: Continuous monitoring, no gate.
- Step 04 — Registration Info Completion: Owner is Company. Entry requires company logged in. Exit: All mandatory fields and documents submitted.
- Step 05 — Proposal & Work Order: Owner is Admin (Proposal) and Company (Work Order). Entry requires registration info complete. Exit: Both documents present.
- Step 06 — Stakeholder Assignment: Owner is Admin. Entry requires proposal available. Exit: All roles assigned with valid permissions.
- Step 07 — Launch & Training: Owner is Admin and Coordinator. Entry requires stakeholders assigned. Exit: Milestones recorded.
- Step 08 — Finance: Owner is Company and Admin. Entry requires launch confirmed. Exit: Payment received and records reconciled.
- Step 09 — Primary Data Form: Owner is Company. Entry requires finance gate cleared. Exit: Primary data submitted and accepted.

- Step 10 — Assessment Submittals: Owner is Company. Entry requires primary data accepted. Exit: All mandatory criteria have evidence.

3. Detailed Functional Requirements

Step 01 Company Registration *[Company]*

Inputs

- Company Name — required, must be unique
- Email Address — required, valid format, must be unique
- Mobile Number — required, valid format and length, must be unique
- Registration Type — required; values: Through CII or Through Facilitator
- Registration Documents (if applicable) — PDF only; UI-enforced; app-level max size not defined

On Success

- Company record created and Registration ID assigned
- Registration event logged with timestamp
- Notification sent to admin team

On Failure

- Field-level errors displayed inline; submitted data retained for correction
- Duplicate email or mobile: specific actionable error message shown

Step 02 Company Login *[Company]*

Inputs

- Email Address — required, valid format
- Password — required

On Success

- Authenticated session established
- Company redirected to portal dashboard

On Failure

- Generic 'invalid credentials' message shown — field-specific disclosure not permitted (security requirement)
- Inactive or pending-approval account: status message directing company to contact support

Step 03 Admin Quick View Monitoring *[Admin]*

Information Displayed

- Company name, Registration ID, and registration type
- Current step and status in the workflow
- Next pending action and responsible party
- Activity log with timestamps
- Milestone completion tracker

Integrity Rules

- Next Step must derive from actual persisted data — not from cached or assumed state
- All log entries must carry system-generated timestamps
- Status must be consistent across all views and modules

Step 04 Registration Info Completion *[Company]*

Sections

- Basic organisational details
- Registered address and plant contact details
- Industry classification, entity type, and sector
- Infrastructure details
- KYC documents: PAN, TAN, GST, and other applicable identifiers
- Supporting document uploads

Validations

- All mandatory fields must be populated; submission blocked if any are empty
- Numeric fields must reject non-numeric input at both UI and backend
- Dropdowns — State, Industry, Entity Type, Sector — all mandatory selections
- Conditional: if SEZ = Yes, sez_doc becomes mandatory
- sec_doc — PDF only (UI); backend MIME type enforcement inconsistently applied
- sez_doc — PDF only (UI); backend MIME type enforcement inconsistently applied
- turnover_doc — PDF only (UI); backend MIME type enforcement inconsistently applied
- File size for all documents — app-level max size not defined

On Success

- Profile persisted; step status updated to Complete
- Admin notified for review

On Failure

- Field-level errors shown inline; partial data retained to avoid re-entry

Step 05 Proposal & Work Order Documents *[Admin / Company]*

Proposal

- Upload owner: Admin
- Allowed type: PDF — mimes:pdf enforced in key backend admin paths
- App-level max size: not defined

Work Order

- Upload owner: Company, or Facilitator if permitted
- Allowed type: PDF (UI-enforced)
- App-level max size: not defined

Versioning Rules

- Each new upload overwrites the current visible version
- Full version history retained for audit purposes
- Most recent version clearly indicated in the UI

Step 06 Stakeholder Assignment *[Admin]*

Assignable Roles

- Coordinator
- Assessor
- Facilitator

Facilitator Permission Toggles

All three toggles are mandatory. Null or undefined values are not accepted.

- Can view pricing? — Yes / No
- Can upload PO on behalf of client? — Yes / No
- Can confirm site schedule on behalf of client? — Yes / No

Validations

- Assigned user must have Active account status at the time of assignment
- Assessor scheduling conflicts must be checked and blocked with a descriptive error
- All assignment fields are mandatory; partial assignment not permitted
- All three Facilitator permission toggles must be explicitly set before saving

On Success

- Assignment notifications dispatched to assigned users
- Workflow progresses to Launch & Training

Step 07 Launch & Training Programme *[Admin / Coordinator]*

Validations

- Mandatory date and schedule fields must be populated before milestone can be marked complete

- Supporting documents, if configured as mandatory, must be present

On Success

- Milestones recorded with timestamps
- Workflow progresses to Finance

Step 08 Finance Management *[Admin / Company]*

Validations

- Amount fields must be greater than zero; non-numeric input rejected
- Payment status must follow a valid pre-defined state machine; invalid transitions blocked
- Mandatory finance documents must be present before progressing to Primary Data (stage gate)
- Supporting document allowed types (backend-enforced): png, jpeg, jpg, pdf
- Supporting document — app-level max size: not defined

Step 09 Primary Data Form *[Company]*

Validations

- All mandatory parameters must be populated; submission blocked if any are missing
- Numeric fields must reject non-numeric input; date fields must enforce correct format
- Mandatory supporting documents for relevant parameters must be present before submission
- Document type (UI-level): pdf, jpg, jpeg, png
- Document size — app-level max size: not defined

On Success

- Primary data persisted and marked as submitted
- Data available for reference throughout the assessment
- Workflow progresses to Assessment Submittals

Step 10 Assessment Submittals *[Company]*

Validations

- All mandatory checklist criteria must have at least one evidence file uploaded
- File type (UI-level): docx, doc, xlsx, pdf, jpg, jpeg, png
- File type (backend): type enforcement NOT consistently applied in current validators — see Section 6
- File size — app-level max size: not defined
- Re-upload: full history preserved; new upload becomes the active version
- Stage completion blocked if any mandatory criterion lacks a valid evidence file

On Success

- Submittals move to Submitted / Under Review status
- Admin and Assessor notified
- Submission timestamp and history recorded in audit log

4. File Upload Validation — Current State

Registration Info

- Fields: sec_doc, sez_doc, turnover_doc
- Allowed types: PDF (UI-level only)
- App-level max size: not defined

Proposal / Work Order

- Fields: proposal, PO, work order documents
- Allowed types: PDF — mimes:pdf in key backend admin paths
- App-level max size: not defined

Finance Proof

- Field: supportingdocument
- Allowed types: png, jpeg, jpg, pdf (backend-enforced)
- App-level max size: not defined

Primary Data Form

- Field: doc[*][document]
- Allowed types: pdf, jpg, jpeg, png (UI-level only)
- App-level max size: not defined

Assessment Submittals

- Fields: document[], reupload doc fields
- Allowed types: docx, doc, xlsx, pdf, jpg, jpeg, png (UI-level only)
- App-level max size: not defined

Actions Required

- Define explicit Laravel max validation rules per upload field in all backend validators
- Agree per-field size limits with the product owner and document in the technical spec
- Enforce MIME type validation at the backend layer consistently across all upload paths
- Without these changes, behaviour will differ between dev, staging, and production environments

GreenCo Module-wise Timeline

MODULE 1: Company Registration & Authentication

Time: 2.5 Hours

Scope

- Company registration with unique validations (email, mobile)
- Document upload (PDF)
- Login and authentication
- Error handling for invalid credentials

MODULE 2: Admin Monitoring Dashboard

Time: 2.5 Hours

Scope

- Workflow status tracking
- Activity logs with timestamps
- Next action and responsible user display

MODULE 3: Registration Information Management

Time: 3.5 Hours

Scope

- Multi-section company profile form
- KYC and organizational details
- Conditional validations (e.g., SEZ logic)
- Multiple document uploads

MODULE 4: Proposal & Work Order Management

Time: 2.5 Hours

Scope

- Proposal upload by admin
- Work order upload by company
- Document versioning and history tracking

MODULE 5: Stakeholder Assignment & Role Configuration

Time: 2.5 Hours

Scope

- Assign coordinator, assessor, facilitator
- Configure mandatory permission toggles
- Validate user status and assignment rules

MODULE 6: Launch & Training Management

Time: 2 Hours

Scope

- Schedule creation and management
- Milestone tracking
- Optional supporting document upload

MODULE 7: Finance & Payment Management

Time: 3.5 Hours

Scope

- Payment entry and tracking
- Finance document uploads
- Payment status state transitions

MODULE 8: Primary Data Form

Time: 3.5 Hours

Scope

- Large structured data form
- Numeric and date validations
- Supporting document uploads

MODULE 9: Assessment Evidence Management

Time: 3 Hours

Scope

- Checklist-based evidence submission
- Multiple file uploads per criterion
- Re-upload with version history

MODULE 10: File Upload Validation & Standardization

Time: 2 Hours

Scope

- Backend MIME type validation
- File size enforcement
- Consistent validation across all modules

-

TOTAL:28 HOURS

PART 2

Business Requirements Document

Through Facilitator Flow — Registration to Assessment Submittals

1. Document Purpose & Scope

This BRD documents the exact functional flow for companies registering through a Facilitator on the GreenCo platform. It covers every step from company registration up to and including assessment submittal upload, with ownership, validation rules, and system behaviour defined for each step.

This flow is distinct from the Through CII direct registration path and must be maintained as a separate SOP. The flow type identifier is `process_type = 'f'`.

In Scope

- Company registration via Facilitator route
- Registration info completion by Company
- Contract / work order upload by Consultant
- Contract acceptance and PO amount entry by Admin (CII)
- Project code creation by Admin (CII)
- Project Coordinator assignment by Admin (CII)
- First proforma invoice upload by Admin (CII)
- Proforma invoice payment by Consultant
- Payment acknowledgement by Admin (CII)
- Site visit report upload by Consultant
- Primary data form upload by Company
- Primary data approval by Admin (CII)
- Assessment submittal upload by Company
- Re-upload loop and Admin review of assessment submittals
-

2. Milestone Progression

The following milestones must be completed in sequence. Each one is a gate that must be passed before the next can begin.

- 1. Company account registered
- 2. Registration info filled by Company
- 3. Contract document uploaded by Consultant
- 4. Contract accepted or rejected by CII
- 5. Project code uploaded by CII
- 6. Project Coordinator assigned by CII
- 7. First proforma invoice uploaded by CII
- 8. Consultant pays first proforma invoice
- 9. CII acknowledges proforma payment
- 10. Company uploads all primary data forms
- 11. CII approves all primary data
- 12. Company uploads all assessment submittals
- 13. Admin reviews and accepts or rejects assessment submittals

3. Detailed Functional Requirements

Step 01 Company Registration — Through Facilitator *[Company]*

Inputs

- Company Name — required, unique
- Email — required, valid format, unique
- Mobile — required, valid format and length, unique
- Registration Type — required; value: Through Facilitator
- Facilitator Selection — mandatory when Registration Type = Through Facilitator

Validations

- Registration type must be explicitly selected
- Facilitator selection is mandatory in this path — cannot proceed without it
- Email and mobile must each be unique in the system

System Behaviour on Success

- Company record created with process_type = 'f'
- Facilitator mapped to company project via CompanyFacilitator
- contract_doc_status set to '1' for facilitator path
- Activity log entry: company account registered
- Quick view next step: Fill Registration Info (owner: Company)

Step 02 Registration Info Completion *[Company]*

Inputs

- Basic organisational profile
- State, city, address, pincode
- Plant contact details
- Industry classification, entity type, sector
- Infrastructure, turnover, employee details
- Tax details — TAN, PAN, GST
- Registration documents: profile doc, turnover doc, SEZ doc (conditional)

Validations

- All mandatory fields must be populated before submission
- Numeric fields (turnover, employee count, pincode) must contain valid numeric values
- Mandatory dropdowns must have a selection made
- SEZ document required only if SEZ flag = Yes
- File type checks exist at UI level for some documents
- App-level file size max not explicitly defined

System Behaviour on Success

- Registration info status marked complete
- Quick view next step updated: Consultant will upload Contract Document

Step 03 Consultant Uploads Contract / Work Order Document *[Facilitator]*

•

Validations

- Only the assigned Facilitator for the project can upload this document
- File is required — upload cannot be submitted empty
- File type must be PDF
- Document must be linked to the correct project reference
- Re-upload must maintain a log trail of all previous versions

System Behaviour on Success

- Activity log: Consultant uploaded contract document

- Quick view next step: Contract acceptance / rejection by CII

Step 04 Admin (CII) Reviews and Accepts / Rejects Contract *[Admin]*

Inputs

- Approval status — Accept or Reject (mandatory)
- PO amount without GST — required if accepted, must be numeric and greater than zero
- Rejection remark — mandatory if rejected (business policy)

Validations

- Approval status cannot be left blank
- PO amount is mandatory on acceptance and must be greater than zero
- Rejection reason must be provided when rejecting
- Only an authorised Admin role can submit this action

System Behaviour — Accepted

- PO amount persisted against the project
- Quick view next step: Upload Project Code by CII

System Behaviour — Rejected

- Workflow returns to Consultant / Company for correction
- Activity log updated with rejected status and remark

Step 05 Admin (CII) Creates / Uploads Project Code *[Admin]*

-

Validations

- Project code is required — cannot be blank
- Project code must be unique across all projects
- Accepted contract status must exist as a prerequisite before this step is enabled

System Behaviour on Success

- Project code persisted and linked to the project
- Activity log: CII provided project code
- Quick view next step: Assign Project Coordinator

Step 06 Admin (CII) Assigns Project Coordinator *[Admin]*

Inputs

- Coordinator selection from active user list

Validations

- Coordinator selection is mandatory
- Selected Coordinator must have Active account status
- Duplicate assignment for the same project must be blocked

System Behaviour on Success

- Coordinator details visible in quick view
- Assignment notification sent to Coordinator
- Quick view next step: CII to upload first invoice

Step 07 Admin (CII) Uploads First Proforma Invoice *[Admin]*

Inputs

- Invoice document file
- Invoice amount and details
- Invoice metadata — date, type, as configured

Validations

- Invoice amount must be greater than zero
- All required invoice fields must be populated
- File type validation applies per module configuration
- Invoice must be linked to the correct project and company

System Behaviour on Success

- Activity log: CII uploaded first proforma invoice
- Invoice send behaviour defaults to Facilitator for facilitator assessment mode
- Quick view next step: Consultant will upload Site Visit Report

Step 08 Consultant Uploads Site Visit Report *[Facilitator]*

Inputs

- Site visit report document
- Optional: visit date, remarks, or summary metadata as required by the form

Validations

- Site visit report file is required — upload cannot be submitted empty
- File type must be PDF — mimes:pdf enforced in backend
- Upload is permitted only for the assigned Facilitator
- Step cannot be accessed before all prerequisite steps are complete (stage gate enforced)

- App-level file size max not explicitly defined

System Behaviour on Success

- Site visit report stored and milestone updated
- Activity log entry recorded with timestamp
- Workflow progresses to next configured step

Step 09 Consultant Pays First Proforma Invoice *[Facilitator]*

Inputs — Offline Mode

- Transaction ID
- Supporting payment document — allowed types: png, jpeg, jpg, pdf

Validations

- Transaction ID required in offline mode
- Supporting document required and must be one of the allowed types

System Behaviour on Success

- Payment record saved against the project
- Activity log: Consultant paid first proforma invoice
- Quick view next step: CII to acknowledge proforma payment

System Behaviour on Rejection

- Rejection activity logged
- Workflow returns to Consultant for correction

Step 10 Admin (CII) Acknowledges Proforma Payment *[Admin]*

Inputs

- Approval or rejection of the payment submission

System Behaviour — Approved

- Payment acknowledgement recorded
- Activity log updated to Done status
- Workflow progresses to Company primary data upload

System Behaviour — Rejected

- Rejection activity logged
- Workflow returns for Consultant to resubmit payment

Step 11 Company Uploads All Primary Data Forms *[Company]*

Inputs

- Primary data parameters as defined by the checklist for the company's sector
- Supporting documents for relevant parameters — types: pdf, jpg, jpeg, png

Validations

- All mandatory parameters must be populated before submission
- Numeric and date fields must be in the correct format
- Supporting documents for mandatory parameters must be present
- Gate condition: submission count must reach the configured threshold — `final_submit_docs >= 112`
- App-level file size max not explicitly defined

System Behaviour on Success

- Primary data marked as submitted
- Activity log: Company uploaded all primary data
- Quick view next step: CII to approve all primary data

Step 12 Admin (CII) Approves All Primary Data *[Admin]*

Validations

- Gate condition: approved primary data count must reach configured threshold — `primary_data_approval_count >= 110`
- Only authorised Admin role can perform approval

System Behaviour on Success

- All primary data marked as approved
- Activity log updated
- Quick view next step: Company to upload all assessment submittals

Step 13 Company Uploads Assessment Submittals *[Company]*

Screen

`company/checklist_documents/{projectid}`

Inputs

- Document title — required for each upload
- Evidence file — required for each criterion

Validations

- All mandatory checklist criteria must have at least one evidence file uploaded
- Document title is required — cannot be blank
- File is required — empty upload not permitted
- Storage path per upload: `uploads/companychecklist/{company_id}/{criteria_id}`
- App-level file type enforcement not consistently applied in current backend validators

- App-level file size max not explicitly defined

System Behaviour on Upload

- One database row created per uploaded file in CompanyChecklistDocuments
- document_status set to 0 — under review / newly uploaded
- When uploaded count matches total checklist criteria for the sector, activity logged: Company uploaded all assessment submittals
- Facilitator-linked route logs activity with owner flag 2; non-facilitator route logs with owner flag 1

Step 14 Company Re-uploads Assessment Submittal *[Company]*

Validations

- Dynamic file field reuploaddocument{checklistdoc_id} is required
- Re-upload is permitted only by the Company — not by Facilitator

Replace File = Yes

- Existing document path is replaced
- Document status reset to 0 (under review)

Replace File = No

- Existing row retained; old document status reset to 0
- New supporting row created with status 0

System Behaviour on Re-upload

- Re-upload activity logged
- Admin and Coordinator notified of the re-upload

Step 15 Admin Reviews Assessment Submittals *[Admin]*

Per-Document Decision Inputs

- document_status{docId} — accept or not accept per document
- document_remarks{docId} — remarks per document

On Non-Acceptance

- CompanyChecklistDocNotAccepted notification sent
- For facilitator path (process_type = f): notification goes to Facilitator
- For non-facilitator path: notification goes to Company

Full Completion Trigger

- System computes total checklist criteria for the project group
- System counts criteria having at least one approved document (status = 1) grouped by criteria_id
- When all criteria are approved with Facilitator assigned: activity logged with owner flag 2
- When all criteria are approved without Facilitator: activity logged with owner flag 1

4. File Upload Validation — Current State

No explicit app-level file size limit is defined in the backend validators across this flow. Effective limits are governed by server-level PHP configuration (`upload_max_filesize`, `post_max_size`), which may vary between environments.

Contract / Work Order Document

- Allowed type: PDF
- App-level max size: not defined

Site Visit Report

- Allowed type: PDF — `mimes:pdf` enforced in backend
- App-level max size: not defined

Finance Supporting Document (Invoice Payment Proof)

- Allowed types: `png`, `jpeg`, `jpg`, `pdf` (backend-enforced)
- App-level max size: not defined

Primary Data Form Documents

- Allowed types: `pdf`, `jpg`, `jpeg`, `png` (UI-level)
- App-level max size: not defined

Assessment Submittal Documents

- Allowed types at UI: `docx`, `doc`, `xlsx`, `pdf`, `jpg`, `jpeg`, `png`
- Backend type enforcement: not consistently applied in current validators
- App-level max size: not defined

GreenCo – (Through Facilitator Flow)

Total Timeline: 30 Hours

MODULE 1: Company Registration via Facilitator

Time: 2 Hours

Scope

- Company registration with facilitator selection
- Unique validation (email, mobile)
- Mapping facilitator to company
- Initial workflow setup (process type handling)

MODULE 2: Registration Information Management

Time: 2 Hours

Scope

- Multi-section company profile form
- KYC, infrastructure, tax details
- Conditional document uploads (SEZ logic)
- Data persistence

MODULE 3: Contract / Work Order Management

Time: 2 Hours

Scope

- Contract upload by facilitator/consultant
- File validation (PDF)
- Version tracking and re-upload support

MODULE 4: Contract Approval & PO Handling

Time: 2 Hours

Scope

- Admin approval/rejection of contract
- PO amount entry and validation
- Rejection remarks handling
- Workflow rollback on rejection

MODULE 5: Project Setup & Coordinator Assignment

Time: 2.5 Hours

Scope

- Project code generation (unique)
- Coordinator assignment
- Validation for active users

MODULE 6: Invoice & Site Visit Management

Time: 3.5 Hours

Scope

- Proforma invoice upload
- Invoice metadata handling
- Site visit report upload
- File validation and mapping

MODULE 7: Payment Processing & Acknowledgement

Time: 3.5 Hours

Scope

- Payment entry (transaction ID + proof)
- File upload validation
- Payment approval/rejection by admin
- Status tracking

MODULE 8: Primary Data Management

Time: 3.5 Hours

Scope

- Large structured primary data form

- Numeric/date validations
- Supporting document uploads
- Submission threshold validation

MODULE 9: Primary Data Approval

Time: 2.5 Hours

Scope

- Admin review and approval
- Threshold-based approval validation
- Workflow progression

MODULE 10: Assessment Submittal Management

Time: 3 Hours

Scope

- Checklist-based document uploads
- Document mapping per criteria
- Multiple file uploads
- Submission tracking

MODULE 11: Re-upload & Review Workflow

Time: 3 Hours

Scope

- Re-upload logic (replace vs new file)
- Status reset handling
- Notification triggers
- Admin review per document

MODULE 12: File Upload Validation Standardization

Time: 2.5 Hours

Scope

- MIME type validation across modules
- File size limit enforcement
- Backend consistency

Justification

- Cross-module updates required
- Prevents environment-specific issues
- Ensures production stability

PART 3

CII Assign Facilitator — Complete Process Guide

1. What This Flow Is

Flow is the end-to-end project lifecycle process under the GreenCo system where CII assigns a Facilitator. It begins with company onboarding and moves through proposal and contract approvals, facilitator assignment, invoice cycles, data submission, assessment evidence, scoring, certification, and final closure.

2. Step-by-Step Detail

Each step below shows its business purpose, who owns it, what the next step is, and what must be verified before the flow can progress.

Step 1 Company Registered *[Company]*

Business Purpose

This is the entry point of the entire flow. The company account and its associated project record must exist before any subsequent actions can occur. No documents or data are required here — it simply marks that onboarding has started.

Ownership

- **Current owner:** Company
- **Next step:** 2 — Fill Registration Info

Validations to Check

- Company account exists and is active in the system

- Project entry has been created and mapped to this company
- Flow start status is not blocked — project is in an active state

Step 2 Company Filled Registration Info *[Company]*

Business Purpose

The company completes all mandatory profile and organisation details. This step ensures that the system has enough baseline company information before CII begins engaging with proposal documents. Incomplete registration here will prevent CII from meaningfully reviewing the project.

Ownership

- **Current owner:** Company
- **Next step:** 3 — CII uploads proposal document

Validations to Check

- All mandatory registration fields have been filled and saved
- Required company profile sections are complete
- Any mandatory documents required by the active form configuration are present

Step 3 CII Uploaded Proposal Document *[CII]*

Business Purpose

CII shares the official project proposal document with the company. This document sets out the terms and scope before the company is asked to submit a work order. Without a proposal on file, the company cannot meaningfully respond.

Ownership

- **Current owner:** CII
- **Next step:** 4 — Company uploads work order document

Validations to Check

- Proposal file has been uploaded and is linked to this specific project
- The uploaded document is retrievable from the project's document store

Step 4 Company Uploaded Work Order Document *[Company]*

Business Purpose

The company submits the work order or contract artifact in response to the proposal. This document is the company's formal commitment. It then moves to CII for a critical approval gate. This step may be revisited if CII rejects the document at Step 5.

Ownership

- **Current owner:** Company
- **Next owner:** CII

- **Next step:** 5 — CII approves or rejects the work order

Validations to Check

- Work order document exists in the system
- Document is attached to the correct project and company

Step 5 Work Order / Contract Approval by CII [CII]

Business Purpose

This is the first major approval checkpoint in the flow. CII reviews the uploaded work order and either accepts it (allowing the project to advance to code assignment and invoicing) or rejects it (sending the company back to re-upload a corrected document). This gate exists to ensure only valid, agreed work orders proceed into project setup.

Ownership

- **Current owner:** CII
- **Next owner on accept:** CII — moves to Step 6
- **Next owner on reject:** Company — returns to Step 4

Accept Path

- Activity logged: "Work Order/ Contract Document Accepted"
- next_activities_id is updated to 6
- Flow advances to project code stage

Reject Path

- Activity logged: "Work Order/ Contract Document Rejected"
- next_activities_id is rolled back to 4
- Company must fix and re-upload the work order document

Validations to Check

- CII decision has been explicitly captured as accepted or rejected — ambiguous states block progress
- On reject, confirm that next pointer has been set back to 4
- On accept, confirm that next pointer has moved forward to 6

Step 6 CII Provides Project Code [CII]

Business Purpose

After the work order is accepted, CII assigns an official project code or application number. This code becomes the operational identifier for all subsequent actions, assignments, invoices, and documents. The project cannot meaningfully proceed into coordinator assignment or invoicing without a code.

Ownership

- **Current owner:** CII

- **Next owner:** CII
- **Next step:** 61 — Assign Project Coordinator

Validations to Check

- Project code or application number has been generated or assigned
- Project code is persisted in the project metadata and is retrievable

Step 7 Assign Project Coordinator [CII]

Business Purpose

CII assigns a coordinator to the project. The coordinator is responsible for operationally tracking execution progress throughout the lifecycle. This assignment is a prerequisite before any invoice is raised, as the coordinator is the internal tracking owner.

Ownership

- **Current owner:** CII
-
- **Next step:** Upload PI/Tax Invoice

Validations to Check

- A coordinator has been selected from available users
- The assignment record has been saved against this project
- The assigned coordinator account is active and not suspended

Step 8 CII Uploaded PI / Tax Invoice [CII]

Business Purpose

CII raises and uploads the first invoice milestone for this project branch. This invoice must exist on record before the consultant's site visit can begin, establishing the financial commitment before field work. This step marks the transition of action ownership from CII to the Consultant.

Ownership

- **Current owner:** CII
- **Next step:** Consultant uploads site visit report

Validations to Check

- Invoice document or file has been created and uploaded
- Invoice entry is linked to the correct project in the database
- Invoice stage status is captured

Step 9 Consultant Uploaded Site Visit Report [Consultant]

Business Purpose

The consultant submits the site visit outcome report. This document captures the on-ground assessment findings and is required before the facilitator can be assigned. It effectively bridges the invoicing stage and the facilitator contract loop. The site visit must be completed and documented before project facilitation can begin in earnest.

Ownership

- **Current owner:** Consultant
- **Next owner:** CII
- **Next step:** CII assigns a facilitator

Validations to Check

- Site visit report document has been uploaded
- Report is mapped to the current project
- This upload happens only after Step 62 (invoice stage) has been completed

Step 10 CII Assigned A Facilitator [CII]

Business Purpose

CII assigns a facilitator to the project. This triggers the facilitator contract sub-cycle. The assigned facilitator is expected to upload a signed contract fee document in the next step. A notification or email may be dispatched to the facilitator at this point. The assignment is recorded in the company-facilitator mapping table, and the activity is logged using __cii_activity(..., 64, 2, ...).

Ownership

- **Current owner:** CII
- **Next step:** Facilitator uploads signed contract fee document

Validations to Check

- A facilitator user has been selected from available options
- Facilitator assignment has been persisted in the company_facilitator mapping table
- The assigned facilitator account is active
- Notification/email dispatch to the facilitator (where applicable) has been triggered

Step 11 Facilitator Uploads Signed Contract Fee Document [Facilitator]

Business Purpose

The facilitator uploads the signed agreement or fee document for CII review. This document represents the facilitator's formal contractual commitment to the project. Once uploaded, CII reviews it at Step 66 and either accepts it or sends it back for correction. This step may be repeated if CII rejects the document.

Ownership

- **Current owner (intended):** Facilitator — as stated by the activity name
- **Next step:** CII acknowledges facilitator contract document

Validations to Check

- Signed contract fee document has been uploaded by the facilitator
- File is linked to the same project and facilitator assignment
- Document is readable and accessible for CII review

Step 12 CII Acknowledge Signed Contract Fee Document [CII]

Business Purpose

CII reviews the facilitator's uploaded signed contract fee document and decides whether it is acceptable. On acceptance, the flow moves into the first payment cycle. On rejection, the facilitator is sent back to re-upload a corrected version. This gate protects the payment cycle from being entered with an invalid facilitator contract.

Ownership

- **Current owner:** CII

Accept Path

- Activity logged: "CII Accepted Fee Contract Document of the facilitator" (note: this spelling is as-configured)
- First proforma payment track begins

Reject Path

- Activity logged: "CII Disapprove Contract Document"
- Facilitator must re-upload the corrected signed contract fee document

Validations to Check

- CII accept or reject decision has been explicitly recorded
- On accept, confirm next pointer moved to 7
- On reject, confirm next pointer returned to 65

Step 13 Consultant / Company Paid 1st Proforma Invoice [Facilator]

Business Purpose

This step records the completion of the first invoice payment. Either the Consultant or the Company makes the payment against the proforma invoice raised in Step 62. Payment proof or reference should be recorded where applicable. CII will then review and acknowledge this payment at Step 8.

Ownership

- **Current owner:** Consultant / Company

Validations to Check

- Payment received status is available in the system
- Payment proof or payment reference document is present where required

Step 14 CII Acknowledges 1st Proforma Invoice [CII]

Business Purpose

CII finance team verifies and acknowledges the first payment. If the payment is confirmed, the flow advances to the primary data submission stage. If rejected, the Consultant/Company must re-submit or re-pay.

Ownership

- **Current owner:** CII

Accept Path

- Activity logged: "CII will Acknowledgment Proforma Invoice" (note: spelling is as-configured)
- Company is prompted to submit primary data

Reject Path

- Activity logged: "1st Proforma invoice Rejected by CII"
- Payment proof or payment itself must be corrected and resubmitted

Validations to Check

- Finance acknowledgment action has been captured in the activity log

Step 15 Company Uploaded All Primary Data [Company]

Business Purpose

After the first payment is confirmed, the company submits all required primary technical and operational baseline data. This data forms the foundation for the upcoming assessment. The company must complete all mandatory data fields and upload any associated supporting documents before this step can be marked complete.

Ownership

- **Current owner:** Company

Validations to Check

- All mandatory primary data fields have been filled and saved
- Required primary supporting documents have been uploaded
- All data is saved under the correct project context

Step 16 CII Approved All Primary Data [CII]

Business Purpose

CII performs a quality review of the primary data submitted by the company. This is the quality gate before the company is permitted to begin uploading the more detailed assessment evidence. If the primary data is insufficient, CII would not approve and the company would need to revise.

Ownership

- **Current owner:** CII

Validations to Check

- CII review status has been explicitly set to approved
- Primary data set is complete enough to support the assessment evidence stage

Step 17 All Checklist Documents Uploaded by Company *[Company]*

Business Purpose

The company uploads assessment evidence for every required checklist criterion. Each criterion must have an associated supporting document or file before this step can be marked complete. This is the main evidence submission stage and is often the most document-intensive part of the entire flow.

Ownership

- **Current owner:** Company
- **Next step:** 12 — CII approves all assessment submittals

Validations to Check

- Every mandatory checklist criterion has an evidence file attached
- All required submittal slots for this stage are filled — partial uploads are not sufficient
- Each uploaded document is mapped to the correct checklist item and project

Step 18 CII Approved All Assessment Submittals *[CII]*

Business Purpose

CII reviews all checklist evidence submitted by the company and confirms acceptance of the assessment submittals. This approval unlocks the assessor assignment stage.

Ownership

- **Current owner:** CII

Validations to Check

- CII approval action has been recorded in the activity log
- Checklist evidence completeness has been verified

GreenCo – Module-wise Timeline

MODULE 1: Company Onboarding

Total Time: 2.5 Hours

What is included

- Company registration setup
- Profile form (basic fields + validations)
- Mandatory document upload

Why it takes 2.5 hrs

- Forms are straightforward (no complex logic)
 - Validations are standard (required fields, formats)
 - Using Cursor reduces form + API generation time significantly
 - File upload is reusable component (used later modules)
-

MODULE 2: Proposal & Work Order Flow

Total Time: 3.5 Hours

What is included

- Proposal upload (CII)
 - Work order upload (Company)
 - Approval workflow (Accept / Reject with rollback)
 - Requires **decision-based workflow logic**
 - Reject flow must correctly **move back to previous step**
 - Activity logging is required
 - Same approval pattern will later be reused → initial setup effort here
-

MODULE 3: Project Setup

Total Time: 3 Hours

What is included

- Project code generation
- Coordinator assignment

Why it takes 2 hrs

- No complex UI
 - Mostly backend mapping
 - Simple CRUD operations
 - No loops or validations beyond basic checks
-

MODULE 4: Invoice & Site Visit

Total Time: 3 Hours

What is included

- Invoice upload
- Site visit report upload

Why it takes 3 hrs

- Both are **file upload-driven steps**
 - Reuse same upload service
 - Minimal business logic (just validation + mapping)
-

MODULE 5: Facilitator Assignment & Contract

Total Time: 3 Hours

What is included

- Assign facilitator
 - Upload signed contract
 - Approval/reject loop
 - Includes **multi-role interaction** (CII + Facilitator)
 - Requires **mapping table** (company ↔ facilitator)
 - Approval loop must handle **re-upload on rejection**
 - Notification trigger (basic)
-

MODULE 6: Payment Cycle

Total Time: 3 Hours

What is included

- Payment submission (amount + proof)
 - Payment verification (approve/reject)
 - Includes **file upload + financial data capture**
 - Requires **status transitions (Pending → Approved/Rejected)**
 - Reject flow must allow re-submission
 - Slightly sensitive logic (data correctness important)
-

MODULE 7: Primary Data Submission

Total Time: 2 Hours

What is included

- Large form for technical/operational data
 - Approval by CII
 - Form is bigger than onboarding
 - Multiple fields + validations
 - Approval logic reused (no extra effort)
-

MODULE 8: Checklist Evidence Upload

Total Time: 3.5 Hours

What is included

- Dynamic checklist
- Multiple document uploads per checklist item
- Slightly complex due to:
 - Dynamic structure
 - Mapping documents to checklist items
- But optimized using reusable upload logic

MODULE 9: Assessment Approval

Total Time: 2.5Hours

What is included

- Final approval of all submissions
- Simple approval screen
- No new logic (reuse existing approval system)
